Mr. John Herring, General Manager  
Boyles Galvanizing Company  
1461 Kinark Ct.  
St. Louis, MO 63132

Dear Mr. Herring:

This letter is in response to your correspondence of July 26, 1991 requesting that your firm, Boyles Galvanizing Company, be removed from the list of Hazardous Waste Generators in Missouri. This request is based on the current management of the pickle liquor waste used as an effective substitute for a commercial product. According to your correspondence of December 26, 1990 and an inspection by Mr. Gary Meyers of the St. Louis Regional Office the K062 waste is being used or reused as defined in 40 CFR 261.1(c)(s)(ii). It is therefore not a solid waste in accordance with 40 CFR 261.2(e)(1)(ii) and is not a hazardous waste as long as the material is being used as a substitute for a commercial product. You also indicated in your letter that K062 is the only hazardous waste produced at your site.

Boyles Galvanizing Company would not be considered a hazardous waste generator and we will change the status of your firm to an inactive generator. The ID number assigned to your firm will remain in the system in the event that your status should ever change in the future.

If there are any questions concerning this matter you may contact me by calling (314) 751-3176.

Sincerely,

HAZARDOUS WASTE PROGRAM
